```
M_With       --> Males with health insurance
M_Without    --> Males without health insurance
F_With       --> Females with health insurance
F_Without    --> Females without health insurance
All_with     --> All with health insurance
All_without  --> All without health insurance
```

Code files in .ipynb format are acceptable. They should be well documented containing all the information required to understand the process you have followed while doing the assignment.

There are standard methods for handling missing values in the data. These methods might be used for the missing values.

All the columns in the merged dataset are quantitative.
